

module One

Class 11

Intro to List

When we want to store multiple values in a variable we use list

Syntax of List - we will use square brackets ([]) to store values

Indexing in List - similar to strings .

Slicing in List - Similar to Strings .

List **heterogenous nature** - Can store multiple data structure.

Mutable Nature - Can change any values.

Deep copy and Shallow copy in respect to Data structures.

List Traversing

traversing on the basis of values - directly accessing values

traversing on the basis of index(using Range function)

Again similar to Strings

List methods

Basic methods of List - append(), pop(), reverse()

general methods list (dir/help)
