

module One

Class 13

Intro to Set

Set is also used to store multiple values.

Syntax of Set we use ({}) to denote set.

Set has **unordered nature** that means there is no index points but still **it is mutable** lets see how

Set also not allow any duplicate values.

The set() Constructor

Set Traversing

Traverse on the basis of values - it will run on the basis of hash values

unordered traversing always

No index values so no traversing on the basis of index

Set Methods

Sets heavily depends on methods refer w3school

and lets execute some methods

venn diagram approach

General methods(dir/help)
