

module One

Class 9

Functions

Difference between imperative code and **functional code**

Functional code can be called again and again

syntax of making function (def keyword)

```
def functionname():
```

```
    code
```

functionname() --> calling the function

Print vs Return in Functions

Return is used to transfer the result at the place from where the function is called

whereas print is the only way to print the output in terminal

Parameters and arguments

Parameters are a kind of variables we accept in our function

Arguments are the values that we pass to those parameters

keyword arguments , default arguments , default parameters , parameters with values .

Args and kwargs

What is args and kwargs - *args

will see them in future
